Acute toxicity: Assessment	Based on the available data acute toxic effects are not expected after single oral exposure. Inhalable aerosols containing amino functional polysiloxanes may cause harmful effects in the lung in animal experiments. Due to the large influencing parameters (e.g. amine function, degree of substitution, viscosity, composition) an estimation of the toxicological effect on the lung is not possible for untested products of this category. In such cases exposure to inhale aerosols must be prevented by adequate technical measures.
